Motivation

(Duolingo)

Ndubuisi Onyemenam, Chris Cheung, Julia Arizono, Diana Popescu,
Betre Tezera

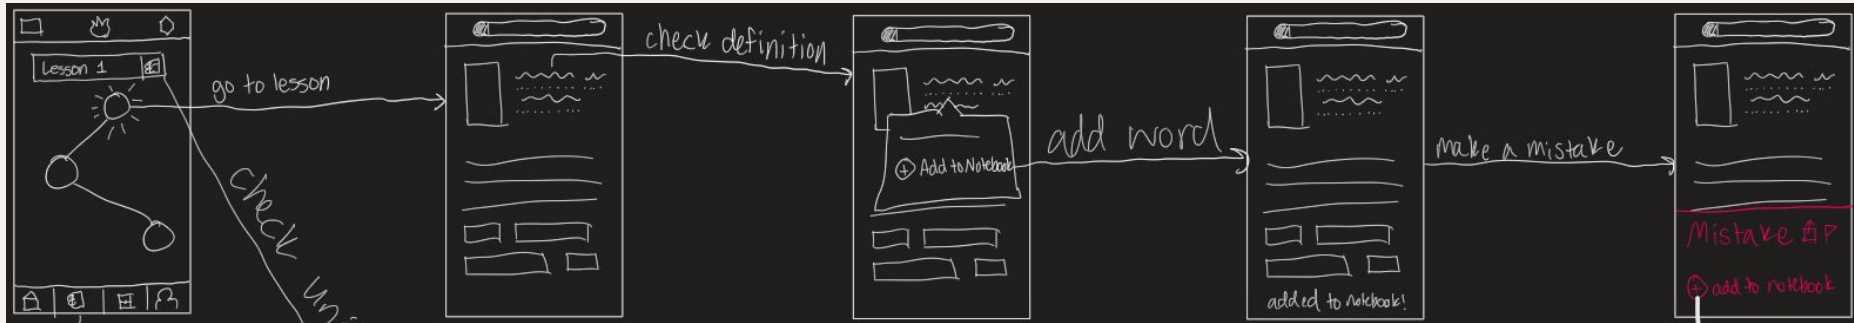

Problems with Current App

- No real way to track progress
 - Solution: Notebook feature
- No real cultural aspect within the app
 - Solution: Cultural fun fact page
- Lacks real life engagement and collaboration with others
 - Solution: Conversation feature
- Allows users a limited learning path
 - Solution: Scenarios landing page
- Lack of assistance when encountering a section that is hard to master
 - Solution: Testimonial feature

Notebook Feature

- Users can save vocabulary, grammar concepts, and mistakes they made during their lessons to an easily accessible notebook that monitors their performance and directs them to appropriate lessons.

Justification

How Learning Works - Chapter 3

- Promote learning goals
- Provide targeted feedback
- Provide flexibility and control

How People Learn II - Chapter 6

- Set goals
- Progress monitoring

The ABCs of How We Learn - R and Y

- Reward
- Autonomy

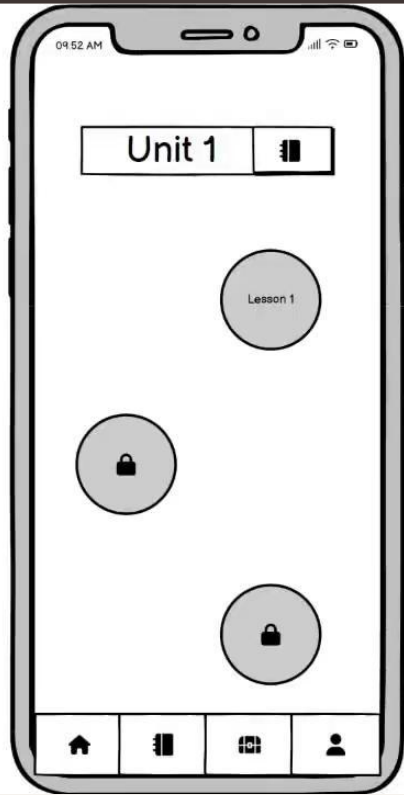

Suggested Change based on point 7: Users can have a list of all the words they've learned in the order they learned them. They can also have the option to favorite certain terms.

Suggested Change based on point 7: The notebook idea is good and one additional change that could be added to it is the ability to save concepts that were missed so they can be practiced later on

Suggestion 1 Feedback: Schools usually spend a lot of time on grammar and conjugations. For example, for every new verb they learned, they would fill out the conjugation chart. It's especially useful since it can be a difficult concept to pick up.

Streaks give a sense of accomplishment, though it doesn't necessarily facilitate learning as most users do lessons just to maintain it. If they lose a high streak, they are not motivated to try to get it back up.

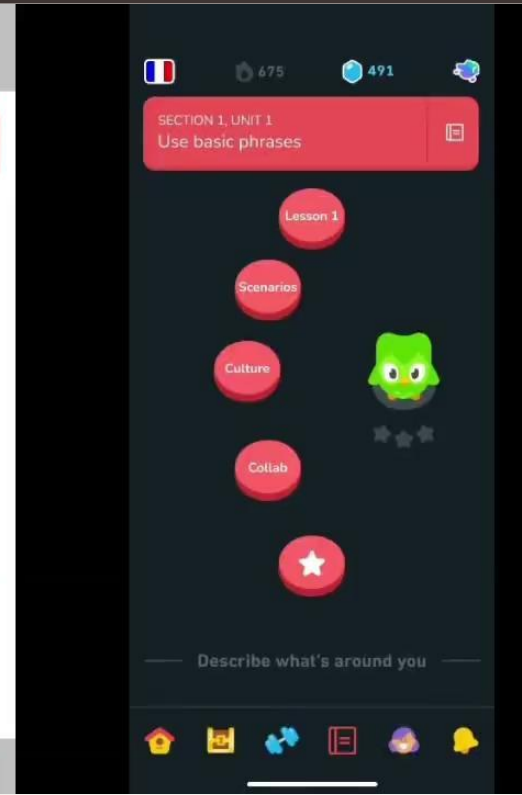

The progress bar at the top is motivating, especially when it changes colors or it does a cute animation.

- Clearer notification
- Make editable

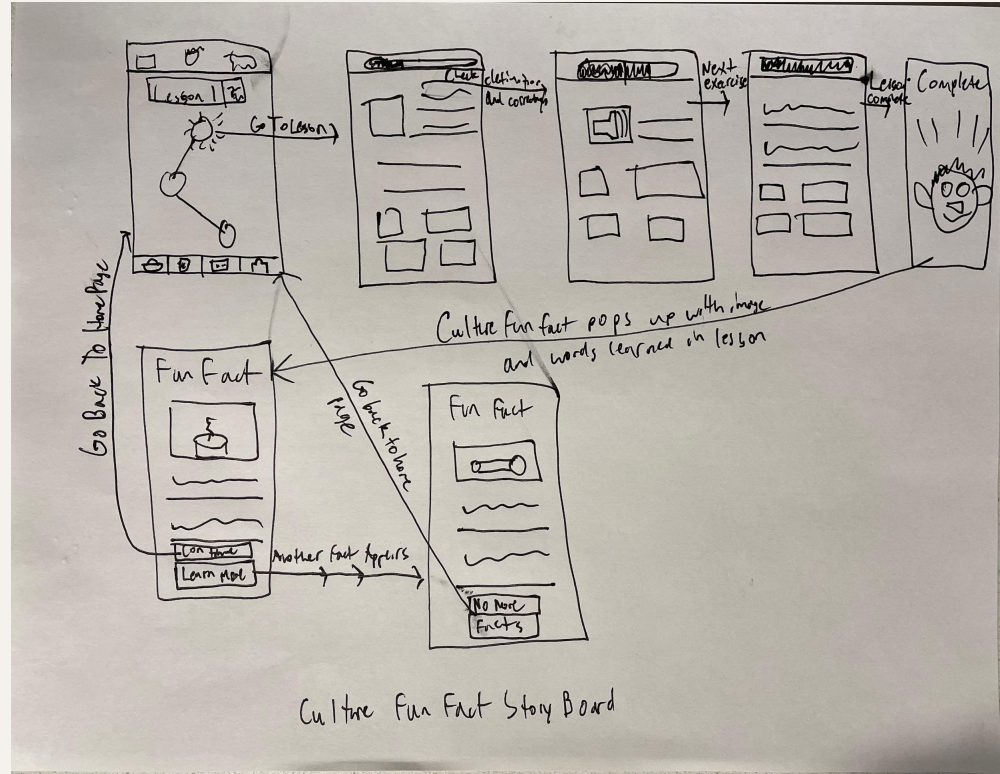

- Consistency
- Functionality

- Color
- Functionality
- Undo

Culture Feature

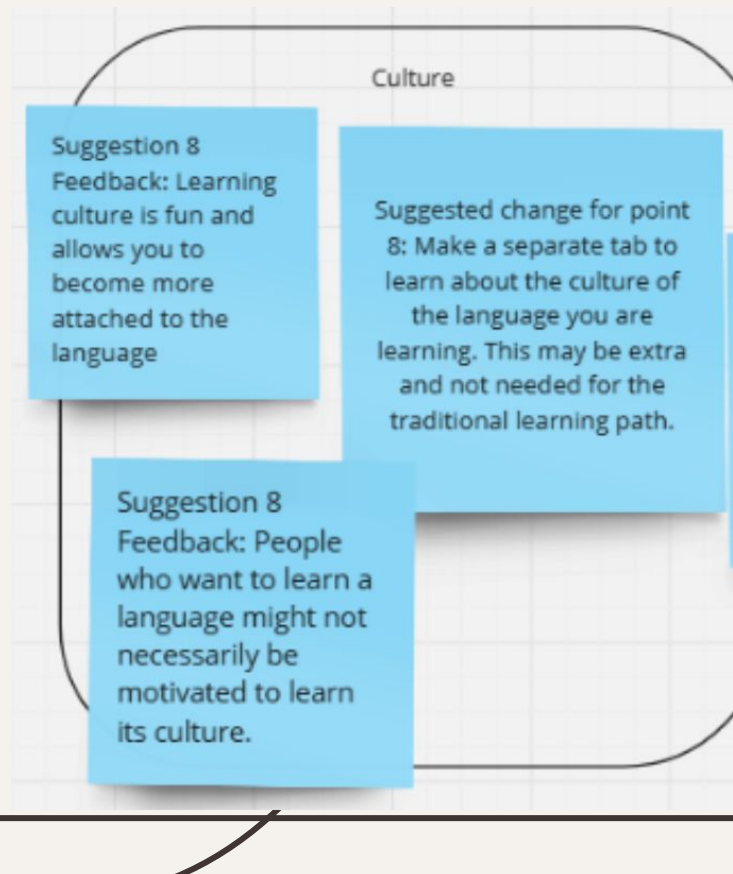

- A user will be able to learn cultural facts about the country they have selected to learn the language for.
- Originally a designed to come after a lesson but made into its own section

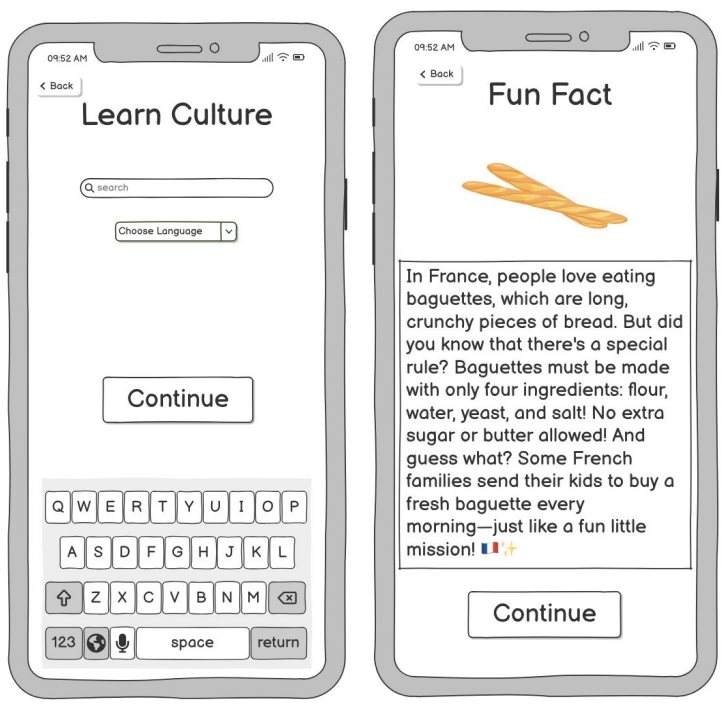

Justification for Culture Feature

How Learning Works - Chapter 3 & 6

- Relevance in what is being learned
- Intrinsic enjoyment can be a strong factor in motivation
- More inclined to learn if students see value in what they're learning

First Design

Second Design

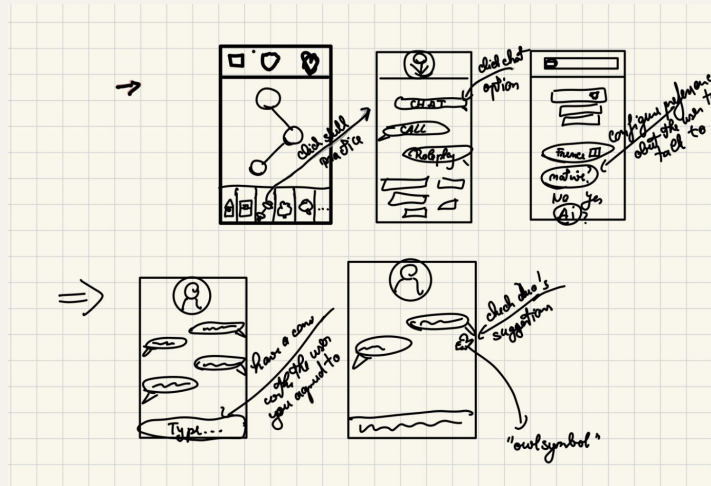

Final Design of Culture Feature

- Minimalistic approach while maximizing motivation in the learner
- First phase helped plan out the fun fact culture section for later iterations
- Second phase helped determine if a user should be able to select which culture they want to learn about
- Third iteration combined user interviews that wanted the app to be more cohesive and symmetric into one final feature

Conversations Feature

- Users can participate in conversations with either their friends or other users. When the conversation goes dry or the users are making any mistakes the app is prepared to provide some help.

Justification

How Learning Works - Chapter 1,3 & 6

- Relevant learning
- Personalized goals that can motivate users better
- Learn by practice

Prior Knowledge Reading

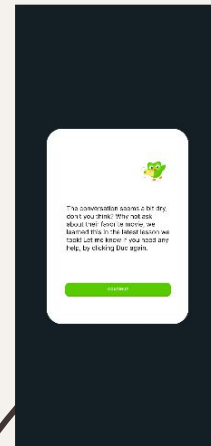

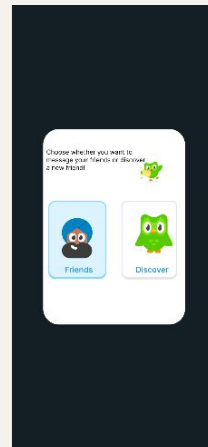

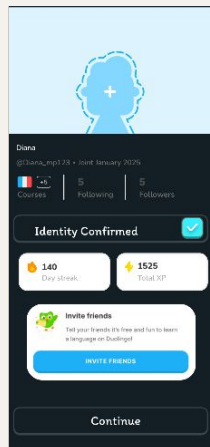

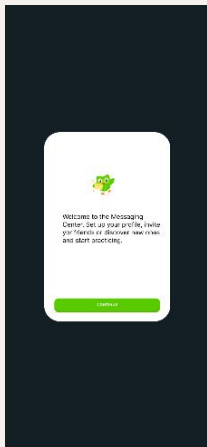

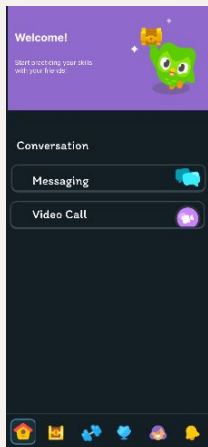

- With the help feature users who already have the basics can quickly find out their gaps of knowledge through live feedback

Suggestions based on list of improvement features: For point 2, Add the forum back to duolingo with censoring related to webtoon bots. For the fake phone call the user could be matched up with another user trying to use the phone call feature to foster real life application of learning

Suggestion 2
Feedback:
Community feedback can give insights into how to better talk

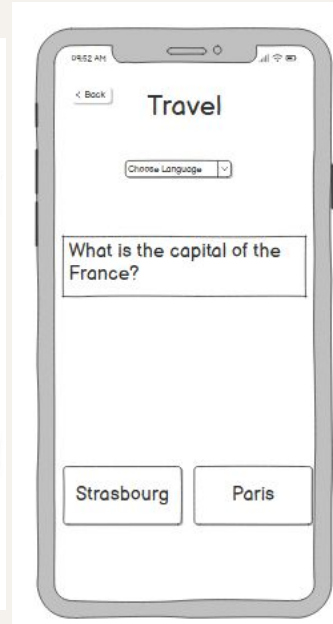

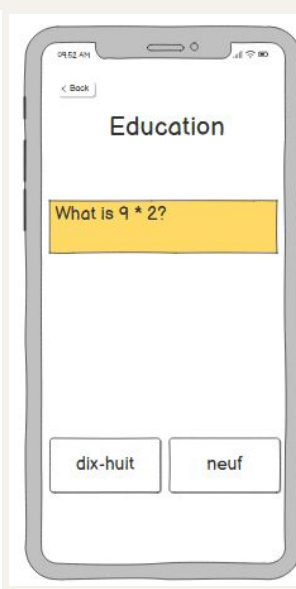

Suggested changes: Most people just log on once daily to do a lesson and maintain their streak. Though it might be good for review, it doesn't necessarily promote learning, so people should be incentivized to do lessons beyond continuing their streak

Design of Conversation Feature

Scenarios Feature

Users can explore a diverse selection of topics and develop their language skills through content tailored to their personal interests and learning preferences

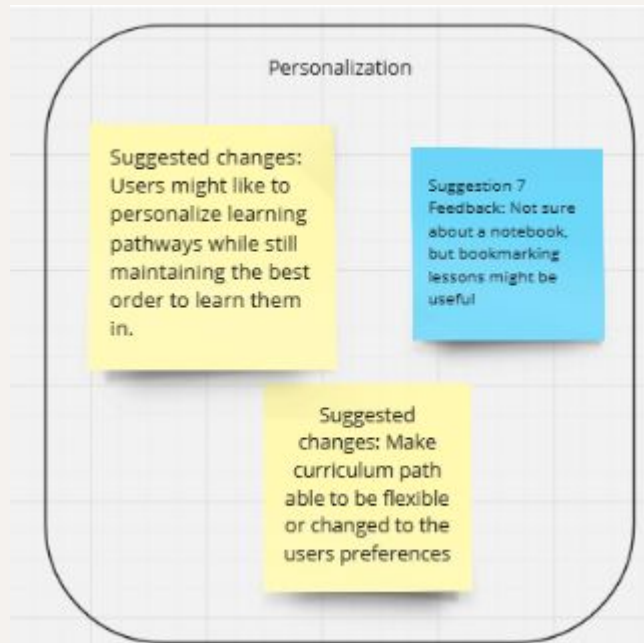

Justification

How Learning Works - Chapter 3

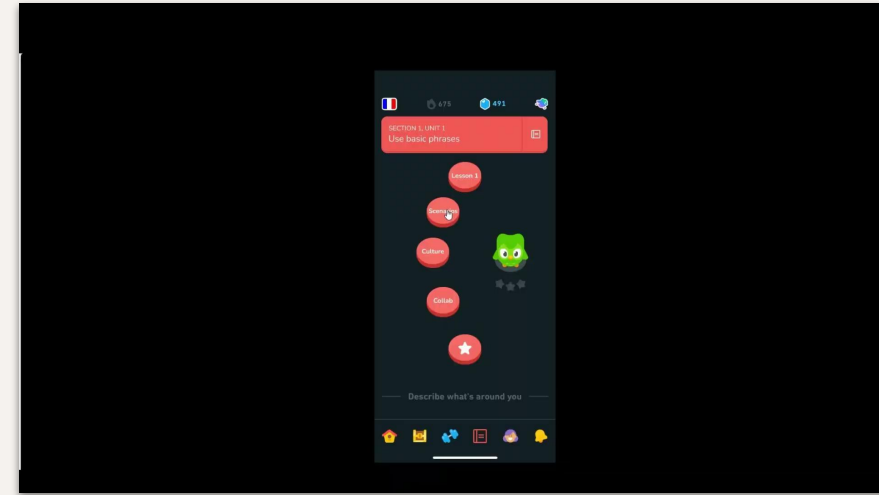

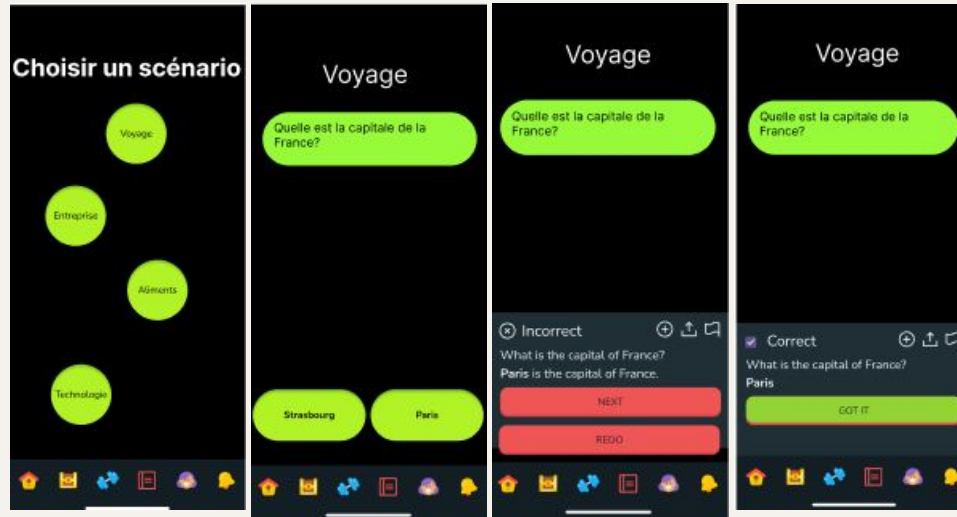

- Users can explore topics that align with their personal interests, increasing how much they value what they're learning
- Topic selection creates opportunities for achievable challenges, promoting confidence and success expectations in language learning

How People Learn II - Chapter 6

- Self-selected topics give users control over their learning journey, supporting autonomy and intrinsic motivation
- Personalized content connects language acquisition to users' personal goals, enhancing engagement and long-term retention

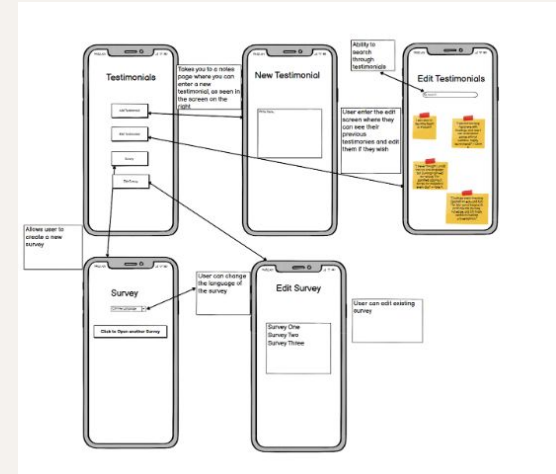

Final Design

TA Feedback: limit number of options
to not overwhelm the user

Testimonial Feature

- At the start of each learning path, users have the option to see testimonials of other learners who initially struggled with the learning material but gained mastery after perseverance.
- Testimonials also include sharing learning strategies for mastery.

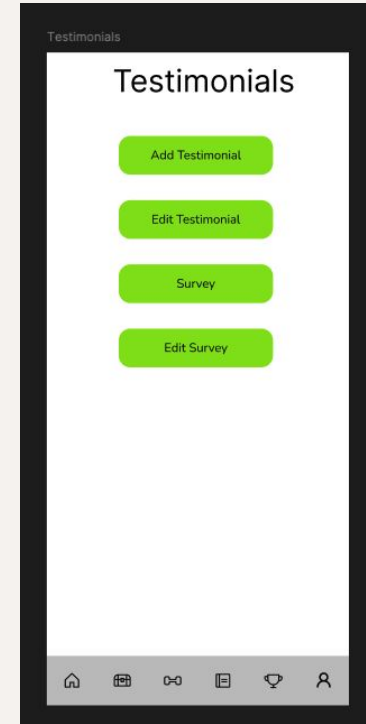

Justification

How Learning Works - Chapter 3

- Role models help with Self-efficacy
- Mastery and growth mindset support
- Promotes strategy awareness

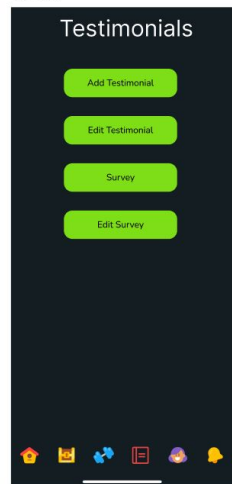

How People Learn II - Chapter 6

- Learner beliefs shape motivation
- Values influence goal pursuit
- Persistence linked to future identity
- Testimonial stories tap into emotional and cultural relevance
